Overview

jtman/jtweb

Document Production Solutions

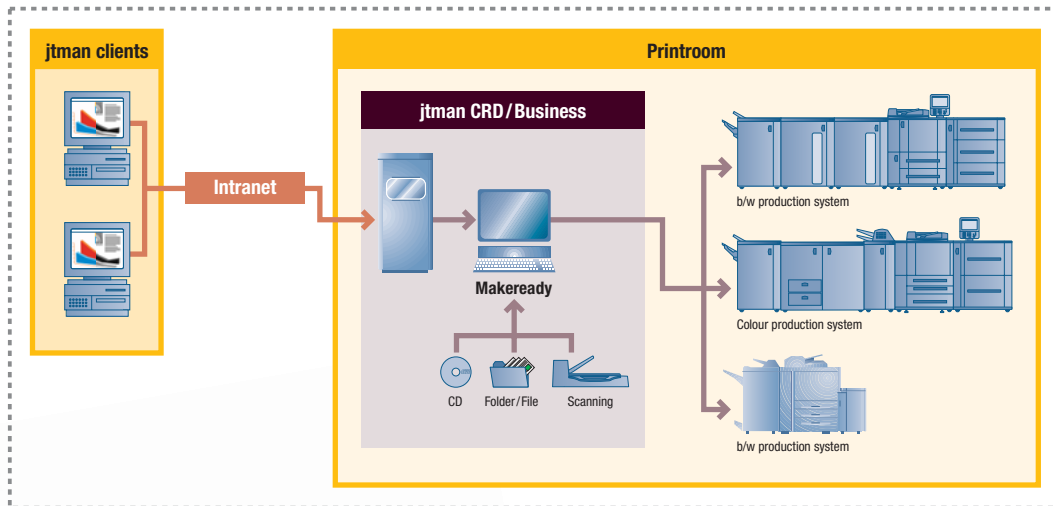

➔ jtman CRD/Business

A fast and effective editing, archiving and administration of print jobs. Jobs created on the desktop PC are sent with a job ticket to the central printing department including task details such as imposition, merge or insert pages. The print room operator then decides on which machine the job is to be printed. This makes jtman CRD/Business an ideal solution for printers and print shops as well in-house print departments.

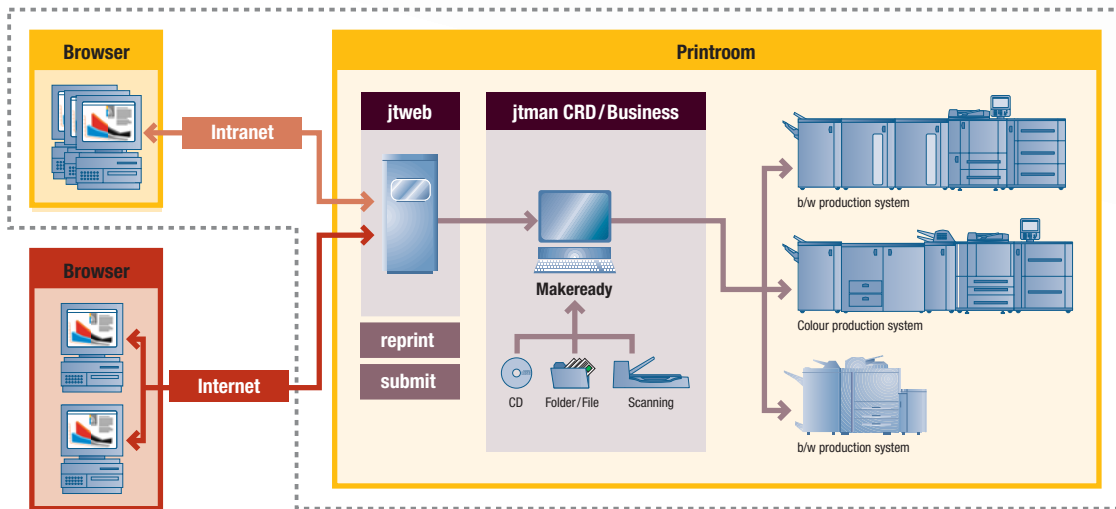

➔ jtweb

A perfect addition to jtman, it sends print jobs via the Internet to the print location. jtweb connects PCs with a central printing location via the Intranet or Internet, allowing regular customers and partners to be effectively integrated into a printing network environment

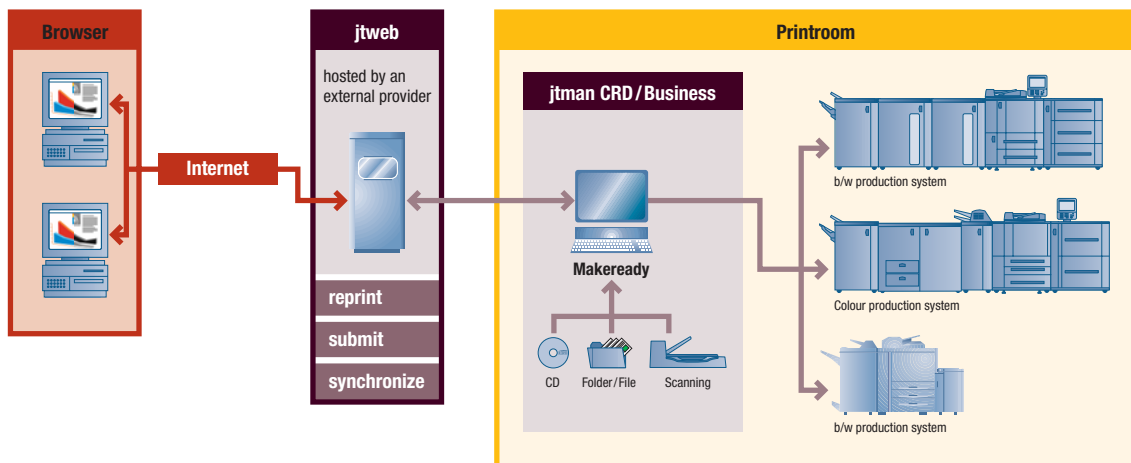

jtman for CRD's

jtman/jtweb for CRD's and Print Providers

jtman/jtweb for Print Providers

➔ jtweb reprint

Print job ordering via Internet. An online catalogue gives the user a selection from which to choose. It gives you cost transparency by creating an online cost estimate before issuing the print order.

➔ jtweb submit

Sends print jobs via Internet or Intranet to the print service provider or in-house print department.

➔ jtweb synchronize

Serving as a bridge connecting firewall protected IT areas; jtweb gives the option of installing the POD server directly with an Internet Provider.
